

TRIPLETT ROUND-UP

Storm Preparedness Issue

Be Prepared to **Weather the Storm**
Before and After!

June Through November Is Storm Season

The Hurricane and Tropical Storm season is quickly approaching! Those of us who live in coastal regions are prone to high winds, power outages flooding and water damage. We consider ourselves to be “experts” on how to prepare for these events and get the items we need to hunker down and be safe during the storm. We got the milk, the bread, the batteries, and the bottled water. We even got our sandbags and plyboards! Should be all set, right? Well, mother nature is clever and very good at throwing curveballs. She is always finding new and interesting ways of letting water and moisture intrude into our houses or businesses – even causing a series of other issues that we may not even notice until it is too late! So here are a few simple meters and instruments that should be added to that checklist. They can help you to stay safe while saving money before and after that not so “perfect” storm.

TECHTALK with Mike

Storm Season is Here Are you Prepared?

Storms bring damage. Tropical storms and hurricanes throw chaos into your life when you are forced to deal with your insurance company. We have tools to help you solidify your claim. Moisture meters play an important part in measuring the amount of moisture in the walls in your home, helping you identify moisture compromised materials throughout the structure. Borescopes help you see unreachable areas – behind walls, in pipes, and inspect machinery that may have been flooded. Temperature and Humidity dataloggers will help track and log the drying process. Gas meters help ensure that flooding has not damaged your natural gas meter, lines and appliances. And never forget a flashlight!

Adding these instruments could help you before, during and after the storm! [Read more](#)

Moisture Meters

MS475, MS100, MS120,
MS150 AND MS300

What do all these storms have in common? High winds and lots of water which leads to flooding and damage to properties. A small investment into a moisture meter can save you lots of time and money. [Read More](#)

Borescopes

BR260, BR300, BR350,
BR500, BR750

Based on your specific needs we have a borescope that will work for you. All High Definition and high resolution. Great for proving your case to insurance companies! [Read More](#)

Humidity & Temperature

RHDL30, RHDL40
AND RHDL50

Dataloggers

Typically used in the drying process after the storm, Temperature and Humidity Dataloggers are essential to any type of remediation after a flood event. These are great for capturing reports in order to provide evidence for insurance claims. [Read More](#)

Gas Meters

GSM120, GSM130,
GSM050, GSM100

Flooding can damage natural gas meters and appliances. Triplett's Combustible & CO handheld meters are used to inspect for leaks in gas lines, appliances and other areas. [Read More](#)

Worklight/Flashlight

FUEZR-2

Ultra-Bright
Worklight/Flashlight

No power = No Light. Triplett has you covered with our 2-in-1 Worklight/Flashlight! An adjustable stand rotates 360° to provide illumination (6,000K color temperature) at multiple angles. [Read More](#)
